

Protect your data from a Disaster!!!

LOCAL GOVERNMENT CORPORATION

LGC now offers an additional offsite backup service.

How this protects you

The most important files on your computer will be automatically backed up and stored in a secure, offsite location.

A small program on your computer

LGC will install a small software program on your computer that works quietly in the background looking for new and changed files to back up. It looks and feels like part of your computer and is integrated with your desktop, so there's nothing new to learn.

Completely secure

LGC takes data privacy and security very seriously. We encrypt your files twice before backing them up securely offsite, using the same encrypted techniques that banks use. Files remain encrypted so only you can see them.

Everything is automatic

When your computer is idle, it automatically backs up new and changed files. You don't have to do anything! When you are using your computer, the backup software program goes into a sleep mode so it will never slow down your computer or internet connection.

Get your files back

Restoring files is quick and easy. If you accidentally lose some of your files, the LGC support department can help you easily restore your data. If your computer is damaged, stolen or "just dies" and you lose all your files, they can easily be restored to a new computer.

***This new offsite backup service is NOT a replacement for normal backup procedures.

**Cost is only \$195 the first year!!!
(includes installation and the
first year annual support fee)
After the first year, the cost is
\$150 per year for support.**
